ADVOCATING FOR OPTIONS IN HEALTH CARE

Jenny Heafey is a full-time executive and mother of three. Her day-in and day-out schedule is jam-packed with commutes, calls, travel, and meetings—it doesn't leave much space for the unexpected. So, in September of 2022, when she received a phone call from her daughter's school explaining that her 10-year-old daughter had suffered a four and half minute seizure during class, Jenny's world turned upside down.

"My daughter had no history of seizures. Immediately, I felt so helpless. As a parent, you want to shield your children from pain, but this was beyond my control," Jenny recalls *(continued)*

TAKING BACK CONTROL

ADVOCATING FOR **OPTIONS IN HEALTH CARE**

PATIENT EXPERIENCE

At least that is what Jenny and her husband feared when they received an official diagnosis. After a series of tests, their daughter, Daya, was diagnosed with Rolandic epilepsy. The family faced a daunting set of choices: two medications, both with a list of potential side effects, but little guidance on alternative treatments. Jenny shared, "I remember sitting there, staring at a list of medications with side effects almost as frightening as the diagnosis itself. How could we accept this as the only option?"

ROOT CAUSE MEDICAL CARE CHANGES THE CONVERSATION

Determined to find a better path, Jenny turned to integrative medicine practitioners, including those at EVEXIAS, for help. This new team of integrative specialists collaborated to develop a comprehensive treatment plan addressing the root causes of Daya's condition. Extensive testing revealed neuro-inflammatory triggers, which prompted significant dietary adjustments and the addition of micronutrient optimization to her regimen. "This care team explained every step, giving us the confidence to move forward," Jenny reflected.

A critical piece of Daya's recovery involved two peptides: Selank and BPC-157. Known for their anti-inflammatory properties, these peptides worked to reduce inflammation in Daya's gut and brain, helping restore balance. Peptides, small chains of amino acids, are like precision tools—targeting specific bodily processes while minimizing side effects. Their ability to promote healing naturally was instrumental in her progress.

MEDICAL FREEDOMS UNDER THREAT

By fall 2023, just as these peptides faced reclassification (meaning they would not be available to the public any longer per the FDA), Jenny recalls the fear of losing access to these lifesaving treatments. "My heart sank when I heard the news," she said. "It was infuriating to see institutions prioritize their interests over patient health. This wasn't about protecting my daughter—it was about protecting their agenda. This move was a major strike against medical freedoms for all patients."

Thankfully, Daya's treatment had already yielded remarkable results. She hasn't had a seizure since the first one, a testament to the power of integrative medicine and peptide therapy. Jenny expresses her gratitude, "We're profoundly grateful to EVEXIAS for guiding us through this journey. Their expertise and personalized care made all the difference for Daya."

Daya's story has a happy ending because organizations like EVEXIAS Health Solutions are dedicated to ushering in a new era of healthcare. EVEXIAS educates practitioners on the latest research and innovations in integrative medicine—partnering with leading experts in the fields of peptide therapy, hormone therapy, nutraceuticals, and more. To date, nearly 5,000 practitioners have been trained and educated on innovative integrative protocols, including hands-on training, and exposure to advanced research. EVEXIAS is a rapidly growing organization, seeking to radically transform healthcare. By reaching more and more practitioners across the country, more patients are getting the care they deserve—care that addresses the root cause and doesn't come with a lengthy list of side effects.
